Abstract: The proceedings contain 60 papers. The topics discussed include: generative adversarial and self-attention based fine-grained cross-media retrieval; region-attentioned network with location scoring dynamic-threshold NMS for object detection in remote sensing images; a dynamic feature weighting method for mangrove pests image classification with heavy-tailed distributions; semi-supervised learning combining 2DCNNs and video compression for action recognition; computer vision based indoor navigation for shopping complexes; CroP: color constancy benchmark dataset generator; virtual Indian sign language interpreter; fast algorithm for three-dimensional cylindrical shape data reduction; and accuracy analysis of ToF and structured light with different baseline lengths in the mobile smart terminals.
