Artificial
Intelligence and
Machine Learning**

**2022 European
Conference on
Natural Language
Processing and
Information
Retrieval**

ARTIFICIAL INTELLIGENCE

Artificial Intelligence (AI) and Machine Learning are disciplines of developing computers and robots capable of parsing data, learning from that data, and making informed decisions with what they've learned. The scope of topics to be covered in the conference includes significant developments, research topics and their applications.

Through months of preparation and with collaborative efforts of all the speakers, committee members, conference secretary and student volunteers, IASSED will provide more open and brilliant platform for global researchers, engineers, practitioners and policy makers. In these conferences, ground-breaking studies and analysis will be shared, insightful ideas will be discussed, and new trends of the Artificial Intelligence fields will be presented vividly in front of audience.

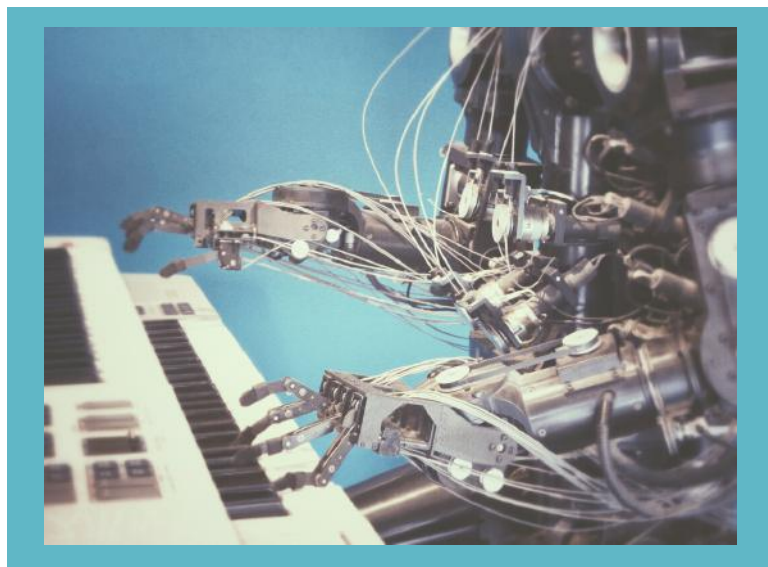

FAIML 2022

It is already growing in popularity with academia, industry, research institutes, and those submitting papers. We are lucky this year in an exceptional group of academics that are delivering keynote speeches covering the conference theme in general and leading-edge research. This in itself is a great reason to attend, yet the wealth of knowledge gained from the other papers will equip you even more. Share your research success with your peers and meet new researchers in your fields.
